

This map is intended for tourists visiting Colorado to ski! The map shows all of the ski resorts in Colorado: whether they are on the IKON pass, the Epic pass, or an independent mountain. The map also shows nearby regional airports that someone may want to fly into instead of flying into DIA and having to drive. The major highways that people use to travel to ski areas are labeled, and other relevant roads are depicted.

Finding my map layers:

- [CDOT Highways](#) (downloaded as a shapefile)
- [Colorado Ski Resorts ESRI](#) (opened in arcGIS desktop to create map)
- [USA Airports ESRI](#) (opened in arcGIS, then copy and pasted layer into my map)
 - Geoprocessing: clip to shape file of the state of Colorado (found on catalog portal)
 - Data projection: NAD 1983 UTM Zone 13N

Methodology:

Changed symbology of Colorado shape file to blue because snow and skiing vibes

Label airports - main = DEN, changed field to name so it's not just an acronym

Label ski resorts

Label highways

- Label class to remove duplicates
- Creating new layers from selected feature for each major highway (I-70, I-25, C-470, US-40, CO-131)
- Used "merge" geoprocessing tool to merge any layers that were split up (ex. I-70 was in multiple parts because I put the project down and came back to it) so this helps keep specific roads in separate layers for labeling purposes
